18 MIL- 450 GM DURASOL SATIN POPUP DISPLAY FILM

DuraSOL Heavy Display is a satin-coated, tear-resistant, rigid PVC film with a waterfast coating for solvent inks. It has a cardboard-like touch and the printouts are characterized by high color brilliance, sharp image definition and long durability. Due to its stiffness and excellent lay-flat properties, it is well-suited for rigid display and pop-up systems. DuraSOL Heavy MUST be attached to a take-up reel in order to create counter-tension to keep the media flat against the printer platen to avoid potential head strikes. The coating for DuraSOL Heavy allows for a very short drying time even with low heating temperatures on an eco- or true-solvent printer. The heaters should be set at a maximum 30 degrees C (86 degrees F) to avoid waves.
