12 mil-310 gm DuraSOL Satin HeavyPoint of Sale Display Film

DuraSOL Medium Display is a satin coated, tear-resistant, rigid PVC film with a waterfast coating for solvent inks. It has a cardboard-like touch and the printouts are characterized by high color brilliance, high image definition and long durability. Due to its stiffness, the film is well suited for rigid displays and pop-up systems. The coating allows for a very short drying time even with low heating temperatures on an eco- or true-solvent printer. The heaters should be set at a maximum 30 degrees C (86 degrees F) to avoid waves.
